

Standard Operating Procedures UCL Quarantine and Imported fish - update 2018

1. All equipment, and fish must never leave quarantine once they have gone in.
2. Water and fish from the quarantine system must never be introduced to the main system.
3. The quarantine system should be on its own water recycling system separate from the main (and other systems).
4. Separate fishnets should be used for quarantine. The nets should be sanitized in Melafix solution in between uses.
5. Fish should be monitored over an acclimatization period of two weeks.
6. Monitor fish for signs of ill health.
7. Quarantined fish are bred, and only disinfected embryos leave the quarantine area.
